### 1 Cadrul de baza

Fixeaza baza (1) cu coloanele (6 si 7) folosind axul central. Coloanele drepte!

### 2 Suportul superior

Prinde placa superioara (2) cu stifturi. Zona marcata NU se atinge.

### 3 Platforma de ridicat

Monteaza platforma pe ghidaje. Trebuie sa alunece usor sus-jos.

### 4 Umple seringile cu apa!

Umple ambele seringi cu apa pana la jumatate. Conecteaza tubul intre ele, fara bule.

### 5 Fixeaza seringile

Prinde seringile pe cadru cu colierele. Daca sunt bule in tub, scoate-le apasand incet.

### 6 Testeaza liftul!

Apasa pe o seringa - platforma URCA! Apasa pe cealalta - COBOARA!

## ATENȚIE!

- Nu folosi prea multa forta cu seringile - pot iesi!
- Ai grija sa nu versi apa pe podea.
- Tubul trebuie fara bule pentru ca liftul sa functioneze.

## Stiai ca...?

- Se numeste 'presiune hidraulica' - asa functioneaza si macaralele reale!
- Incearca cu diferite greutati pe platforma!
